User Manual Outline

- Include lots of pictures/diagrams
- Also include clarification or a section on potential errors
- Safety Manual
- Website and Demonstrational Videos

User Manual of Current Device

- To verify GitHub functionality, a Hello World program was created to use on the Raspberry Pi and committed to the team GitHub repository. The repository was first cloned onto the Pi, after which the program was written and executed locally to confirm it worked. The file was then committed and pushed to GitHub, allowing other team members to pull the changes and confirm synchronization. Each team member made at least one commit to demonstrate familiarity with GitHub and collaborative version control.
- The only usage of this device would be to run this program to get the needed "Hello World" text.
